

## **Division of Reproductive Endocrinology and Infertility**

The Reproductive Endocrinology Division at the University of Iowa now consists of six staff physicians at the University of Iowa and one who is at our Quad Cities outreach office. We recently hired E. Hakan Duran, M.D. as a new faculty in our division. He joins us after having completed his fellowship at the Jones Institute at Eastern Virginia Medical Center. Dr. Duran is a very experienced Reproductive Endocrinologist and will add great depth to the clinical expertise in our division. Dr. Duran is a very skilled physician and has IVF expertise and studies obesity and its effects on fertility. He has also taken over leadership in the educational aspects of our division.

We remain very active clinically and are proud of our highly successful IVF Program. We have one of the highest rates of single embryo transfer with IVF in the country and continue to maintain outstanding pregnancy rates while reducing multiple rates leading to safer IVF treatment. In addition to our IVF and regular Reproductive Endocrinology clinics, we have a Pediatric and Adolescent Gynecology Clinic that is run by Dr. Ginny Ryan and a continued emphasis on fertility preservation headed by Dr. Barbara Stegmann.

In addition to our physicians, we are greatly aided by Elizabeth Graf, PA-C who helps with continuity of care within our clinical activities and is very active seeing patients.

Our educational priorities are focused on our Fellowship. We currently have two fellows in training and have graduated a total of four fellows from our program in recent years. We are pleased to have Dr. Evan Rosenbluth as a second year fellow. Dr. Rosenbluth joined us from the University of Utah Residency Program. In addition, Dr. Jessica Kresowik joined us from our own University of Iowa Residency Program and is our first year fellow. Particular research interests at this time include fertility preservation, single embryo transfer, and the long-term outcomes from IVF. Both Drs. Stegmann and Ryan are funded by the Women's Reproductive Health Research within the department and are devoting significant amounts of time furthering their research careers.
