noncalcareous grading downward to calcareous silt loam to silty clay loam. Overlies bedrock units or colluvium. This mapping unit

In places this unit is mantled with one to three meters of fine to medium, well sorted medium to large gravel overlying less than one meter of bedrock. The gravel is well rounded and also has common small cobbles. The Pesca Ridge Formation is described by Amy Sabin (IGS) in association with Quaternary field and office expertise; Robert Rowden (IGS)
