The good news -- 411,000 jobs created in May. Most in a decade or more. The downside -- all but 41,000 of the jobs were with Census; hence, temporary jobs. But it was good enough to be breaking news for The Washington Post.

News Alert: U.S. employers added 431,000 jobs in May, but the unemployment rate fell to 9.7 percent compared to 9.9 percent the month before
08:31 AM EDT Friday, June 4, 2010
---------------------

The nation added 431,000 jobs in May, largely due to hiring for the U.S. Census. Private employers added 41,000 jobs, a disappointment compared to the 180,000 positions forecasters had expected, suggesting the pace of economic healing has slowed. The unemployment rate fell to 9.7 percent in May, from 9.9 percent in April.

U.S. stock futures were down before the opening bell.

Search term: jobs created It was frustrating trying to find a 'cleaner' search term. Using Archivist desktop it found 1,500 tweets, but almost half were from the previous day and not about the morning announcement. But any other addition to get greater specificity failed; it produced fewer tweets than I knew where there.

So, Archivist desktop contains 1,500 tweets from both June 4 and June 3. But Archivist online has only 500 tweets from June 4. So they can supplement each other.
