University of Iowa
ELECTRONIC RESOURCES IN A NEXT GENERATION CATALOG

Wendy Robertson
The University of Iowa Libraries
Electronic Resources & Libraries, 2008
OVERVIEW

- Next generation catalogs and Primo
- Old “Smart Search” at The University of Iowa
- Implementation issues
- New “Smart Search”
- Features and Examples
- Problems
- Moving where users are
- Future plans
WHAT TYPES OF ELECTRONIC RESOURCES?

- Licensed/purchased full content (journals, books, audio, maps etc.)
- Licensed/purchased databases
- Local digital content (images, audio, video etc.)
- Local full text
- Local websites (including finding aids)
WHAT IS A NEXT GENERATION CATALOG?

“It’s designed less like a “catalog”—an inventory list—and more like a finding aid. It contains data as well as metadata, and it is bent on doing things with found items beyond listing and providing access to them.” – LITA blog, July 7, 2006

Examples:

- NCSU’s Endeca® implementation
- Open WorldCat® –OCLC
- Primo® –Ex Libris
- Aquabrowser Library® –Bowker (e.g. University of Chicago)
- Encore–Innovative Interfaces (e.g. Michigan State)
SELECTED FEATURES OF A NEXT GENERATION CATALOG

- Faceted navigation
- Federated searching
- Full text searching
- Interaction with other systems/use of API’s
- Multiple works merged (FRBR)
- Notification of new items by topic etc.
- Personalization, tagging
- Reader’s advisory/recommendations
- Relevancy ranking
- Reviews
- Search terms highlighted
- Spell checking, did you mean...?
WHAT WE ARE AIMING FOR

- Simple to use, single search box for all our content
- With high quality content and good metadata
PRIMO

- The University of Iowa’s choice for a next generation catalog
- Finding and discovery tool
- Not meant for the advanced researcher
- Work in progress (“Everything is Beta”)
- Does not yet have all possible features of a next generation catalog
“SMART SEARCH” BEFORE

Locally created search of
- Library Catalog – keyword search
- E-journal A-Z list
- Local database of databases, websites, and book and journal collections (previously called the “Gateway”)
- Libraries website

- Results from 4 sources not merged
- Did not include digital collections
E-resources displayed in upper left (always at top, searching in collection of <2000 items)

Top 5 results display for each source
Click “more” for additional resources
E-resources displayed in alphabetical order

No separate interface
E-journals displayed in alphabetical order

Separate interface available
A-Z list from SFX
This interface still exists
Website results displayed in limited relevancy order

Originally no separate interface
Catalog results displayed in reverse system number order

Separate interface available
Traditional ILS
This interface still exists

Sorted by date, author, title
Digital Content Management System (ContentDM)
This interface still exists

No cross searching of with other resources
PRIMO TIMELINE

- Worked on implementation summer 2007
- Focused on
  - Indexing, display, faceting
  - How to load data
  - Basic functionality
  - Appearance, branding
- Local soft release in late September
  [http://smartsearch.uiowa.edu](http://smartsearch.uiowa.edu)
- Full release in mid-January
- Two updates implemented since then
- V.2 will come out this spring
GETTING INFORMATION INTO PRIMO: CATALOG

- Not a live connection—records need to be loaded
- Loaders exists for MARC
- Aleph catalog – loaded in multiple times a day
  - New and updated records loaded
  - Records with changes to circulation information loaded
GETTING INFORMATION INTO PRIMO: A-Z LIST

- Changed procedures to use MARCit records for packages, consortial agreements and free titles
  - Primo gives us the single record display we had been wanting
  - Change in ARL stats gave us more flexibility
- Loaded missing titles into Aleph
GETTING INFORMATION INTO PRIMO: E-RESOURCES DATABASE

- Added field for Aleph ID
- Loaded basic records into Aleph
  - Database had only brief information
  - Standardized publisher information
- Added 930 fields to existing records (controlled vocabulary and misc terms)
GETTING INFORMATION INTO PRIMO: CONTENTDM

- Loader exists for Dublin Core
- We use LC Authorities when possible in CDM
  - DC lacks structure of MARC so some manipulation of names not possible for complex names
- Assess how subjects and types can best work with facets
- Results varied depending on CDM collection settings (standardizing)
- Some data inconsistencies in CDM (standardizing)
EXAMPLE DATA FROM CDM

- (http://digital.lib.uiowa.edu/cgi-bin/oai.exe?verb=ListRecords&set=uipress&metadataPrefix=qdc)

xsi:schemaLocation="http://www.openarchives.org/OAI/2.0/oai_dc/ http://www.openarchives.org/OAI/2.0/oai_dc.xsd">  
  <dc:title>Eminent domain</dc:title>  
  <dc:creator>O’Brien, Dan, 1947</dc:creator>  
  <dc:publisher>University of Iowa Press</dc:publisher>  
  <dc:date>1987</dc:date>  
  <dc:language>English</dc:language>  
  <dc:description>"Eminent Domain" is the hallmark of a mature and talented author. While subtle metaphors and analogies resonate throughout the text, the surface of these stories is charged with vivid scenes of fishing, caring for game birds in winter, branding calves in Nebraska, and rescuing a wounded mountain climber. With both humor and pathos, Dan O’Brien explores the lives of his diverse characters. In ‘The Inheritance,’ a businessman goes fishing after the death of his father and realizes, through memories he tries to evade, the richness of the inheritance his father has left him. ‘Eminent Domain’ tells the story of Willy Herbeck, who’s ‘dirty, sloppy, unsociable, old-fashioned, moody, bullheaded, and ugly.’ But he’s also ‘got class’ and is willing to go to extremes to keep from selling his junkyard to the government. At ease with a wide variety of characters and complex emotional circumstances, O’Brien enriches his stories with authentic voices and thought-provoking resolutions. Each of these stories will return to again and again.---Front flap</dc:description>  
  <dc:relation>Winter cat -- Cowboy on the Concord Bridge -- Seals -- Eminent domain -- The Inheritance -- Weightless -- The wild geese -- Strand of wire -- Final touches -- The Georgia breeze.</dc:relation>

</oai_dc:dc>
NEW SMART SEARCH

- Electronic resources database and digital resources completely integrated with traditional catalog resources
- Federated search is separate option
  - Could be merged with local resources
  - Non-local database searching slower
  - Ex Libris working with vendors to improve response time
- At this time the Libraries website is not included
Digital object from CDM

Collection level record for digital collection from catalog

Traditional MARC records from ILS
Large results can be managed with faceting.

Federated search option.
These come from the electronic resources database.

Single record

Merged display of print and online records
Digital objects usually are under resource type images or text resources etc., but in this case they are 3-D objects.
INCLUSION OF LIBRARIES WEBSITE

- Goal was to have libraries website included at full release
- Public service said not critical
- Still very important for Special Collections finding aids
- Separate search available
WEBSITE

- **Current status:**
  - Successfully crawled [www.lib.uiowa.edu](http://www.lib.uiowa.edu) (omitting pages that don't make sense).
  - Modified an open source Perl product Swish-E Spider: [http://swish-e.org/docs/spider.html](http://swish-e.org/docs/spider.html)
  - Hopefully live before the end of the semester

- **Our biggest challenges:**
  - Crawling logic—Making sure we don't inadvertently access URLs that time out
  - Character encoding as related to HTML and XML entities—we've had to tweak standard Perl packages
MERGING RECORDS IN PRIMO

- Two separate functions—De-duplication and FRBRization
- Rules assess similarity between records. Those that meet a threshold for similarity will be merged.
  - Dedup records are completely merged; individual records cannot be viewed in Primo but do have a link to Aleph catalog
  - FRBR records are merged for display, but also allow viewing of individual titles
EXAMPLE OF SINGLE RECORD DISPLAY

Single record. Online access shows on brief results.

Single link to Aleph catalog.
EXAMPLE OF DEDUP PRINT + ONLINE

Single record. Online access shows on brief results.

Two links to Aleph catalog.

Online record takes priority for display.
EXAMPLE OF FRBR ONLINE + PRINT

Online record takes priority for display

FRBR link

Print record. Published Washington DC, 1990-

Online record. Published Washington DC, 1995-
NAME DISPLAY FROM CDM

ILS names not inverted

CDM names inverted. I could not get them to display properly unless inverted.
ILS & CDM NON-MERGER

Working on this

Few collections have individual object both in catalog and in CDM
EXAMPLE: M.F.A. THESIS AND M.F.A ART

- Print thesis and image of thesis both in Smart Search
- Imperfect because different sources for name
  - LC NAF vs. ULAN (Union List of Artist Names)
  - No authority record in this case

What artist calls self

Official registered name on thesis

Ulrichsweb is #8 in list
FACETING

- Not magic—there has to be data in the records (i.e. good cataloging)
- We added terms based on codes in fixed fields (e.g. Newspaper, CD etc.)

Searched for Mozart:

LINKS TO OTHER RESOURCES

Traveling culture circuit Chautauqua in the twentieth century: from the University of Iowa Libraries.

Subjects: Chautauquas -- United States -- History; Lyceums -- United States -- History.
Description: What was Chautauqua? -- About the collection -- Finding aid for entire collection.
Collection of publicity brochures, promotional advertisements, and talent circulars for performers who were part of the Chautauqua circuit. Derived from the Redpath Lyceum Collection at the University of Iowa Libraries. Materials promote entertainers, lecturers, and performing groups such as teachers, preachers, orators, politicians, actresses, singers, opera stars, glee clubs, concert companies, magicians, and whistlers.
Publisher: Library of Congress

Links made by an API
A little bit circular
Dummy course page. Library widget now a default for all courses.
iGoogle page
IE search option
No Smart Search box....yet
It is just being made right now and should be there after the conference
PROBLEMS

- Online resource link is not being seen
- Databases have been difficult to find because of labels
- Known item searching can be more difficult (especially for major works of literature)
- Librarians concerned it “dumbs down searching”
  - HOWEVER: Users seem to like it
  - Concern that faculty (as expert searchers and older than average students) may not adapt as well as students
FUTURE PLANS

- Inclusion of Libraries’ website
- Talking to LibGuides about including content
- Google™ book search and CIC’s Shared Digital Repository (metadata and full text)
- Full text from local e-journals
- Investigating getting tags from LibraryThing
- Will include data from institutional repository
CONCLUSION

- Need to be flexible
  - Willing to change searching method
  - Able to adjust to constant beta
  - Able to keep up with user’s needs & request
  - Able to incorporate new technology

- Tool that works for many people much of the time, but not for all people all of the time

- ILS not going away

- Electronic resources are especially important for access and have some unique problems
THANKS!
