The Mason City quadrangle, Iowa, is a region of the U.S. Midwest where the bedrock geology is exposed at the surface. The map and cross-section are based on interpretations of the best available information at the time of the survey, which includes data from the soil survey in Cerro Gordo County (DeWitt, 1981). The maximum thickness of the Quaternary deposits within the bedrock valley, and along the Winnebago River and Willow Creek, or from the analysis of water well cutting samples reposited at the Iowa Geological Survey (IGS).

ACKNOWLEDGMENTS
The survey was funded in part through a cooperative agreement with the Iowa Department of Natural Resources. The data and interpretations presented herein are a result of the efforts of many individuals and organizations, including the U.S. Geological Survey, the Iowa Geological and Water Survey, and the Iowa Department of Natural Resources.
