CONTENTS

Administrative Report, by the Director ................................................. 1
Mineral Production for 1915, by George F. Kay .............................. 9
River Waters in Iowa, a Preliminary Report, by George A. Gabriel .... 29
The Iowan Drift, a Review of the Evidences of the Iowan Stage of Glaciation, by Wm. C. Alden and Morris M. Leighton ................. 49
Pleistocene Deposits Between Manilla in Crawford County and Coon Rapids in Carroll County, Iowa, by George F. Kay ................... 213
The Pleistocene Geology of Northwestern Iowa, by J. Ernest Carman .... 233
ILLUSTRATIONS

PLATES

I. Topographic map of a portion of the dissected Kansan drift plain, to face ........................................ 60
II. Topographic map of a portion of the Iowan drift plain, to face .................................................. 62
III. View of dissected Kansan drift plain in northeastern Washington county, Iowa .......................... 63
IV. View of eroded Kansan drift plain in Union county, Iowa ............................................................ 65
V. A. and B. Compared topographies of the typical Iowan drift plain and the dissected Kansan drift plain. 69
VI. A. and B. Compared topographies of the typical Iowan drift plain and the dissected Kansan drift plain. 75
VII. Drift in Johnson county, Iowa, near Iowa river ................................................................. 119
VIII. A. Glacial boulder in Floyd county, Iowa. B. Exposure of loess near Bertram, Iowa ................. 123
IX. Loess ridges bordering North Liberty plain .................................................................................. 147
X. Topographic map of a portion of the Iowan drift plain showing paha, to face ................................ 150
XI. View of drift exposed in Chicago, Milwaukee & St. Paul railroad southwest of Rhodes, Iowa ........ 159
XII. View of eroded Illinoian drift plain in Rock Island county, Illinois ........................................... 165
XIII. Topographic map of a portion of the eroded Illinoian drift plain in Fulton county, Illinois, to face. 168
XIV. Map of Iowa showing drift sheets .................................................................................... Pocket
XV. Map of the Pleistocene deposits of Northwestern Iowa ......................................................... Pocket
XVI. Map of parts of Freeman and Logan townships of eastern Clay county .................................... 268
XVII. Map of southwestern Minnesota and eastern South Dakota showing the course of the Altamont Moraine 289
XVIII. Map of the Sioux Falls-Canton region .................................................................................. 289
XIX. Map of Iowa showing the drainage basins ............................................................................. 309
XX. Profiles of railways crossing northwestern Iowa, to face ......................................................... 310
XXI. Lehatchka and Pattengill pit near Rock Rapids, Lyon county, Iowa .................................... 383
XXII. City gravel pit at Sibley, Osceola county, Iowa .................................................................... 387
XXIII. Chicago, Rock Island and Pacific Railway pit at Sibley ....................................................... 389
XXIV. Gillean pit near Cherokee, Cherokee county, Iowa ............................................................. 399
XXV. Map of central Cherokee county showing location of exposures of Nebraskan till ............... 417

FIGURES

1. Northeast-southwest section near Anamosa and Monticello, Jones county, Iowa ..................... 68
2. Diagram of percentages of cuts and borings showing different depths of leaching of the uppermost till at various places in the area of the Iowan drift ............................................. 82
3. Diagram of valley slope in Kansan area showing relations of the leached zone to the topography. 85
4. Diagram of drift exposed in railway cut west of Vining, Tama county, Iowa .......................... 86
5. Diagram showing relations of super-Kansan gumbo and loess to remnants of the original Kansan drift plain 89

LIST OF ILLUSTRATIONS

FIGURES

32. Wisconsin ground moraine in Freeman township, Clay county .............. 274
33. Morainic topography at north end of West Okoboji lake, Dickinson county ............................................................ 277
34. The Little Sioux valley, looking west, in Okoboji township, Dickinson county ............................................................ 278
35. Ocheydan Mound, seen from the southwest, Ocheydan township, Osceola county ..................................................... 286
36. Map of part of Nobles county, Minnesota .................................................. 287
37. Map of part of eastern South Dakota and adjoining parts of Iowa and Minnesota ..................................................... 295
38. View across the Little Sioux valley at Sioux Rapids .................................. 315
39. View across the level Kansan drift-plain northwest of Hartley, northeastern O'Brien county ................................................. 324
40. View of the Kansan drift topography along Broken Kettle creek, western Plymouth county ................................................ 326
41. Topography of the loess covered region north of Turin, Monona county .... 327
42. View showing the rugged topography in the lower course of Brooke creek, northwestern Buena Vista county ..................... 328
43. Cross profile of a tributary of the Little Sioux ........................................... 329
44. Sketch of a road-cut, Washington township, Plymouth county ... 345
45. Sketch of exposure showing thinning of loess toward crest of a slope, Little Sioux valley east of Cherokee ........................................ 346
46. View of road-cut on east slope of Little Sioux valley east of Cherokee 347
47. Sketch showing relation of loess and loesslike clay to underlying till and gravel, Cherokee township, Cherokee county ................. 348
48. Sketches showing cross-bedding and basin structure of sand in a pit in Liberty township, O'Brien county ................................ 365
49. Cross section of a pit in Liberty township, O'Brien county ....................... 366
50. Gravel hill on Willow creek, Liberty township, O'Brien county .......... 368
51. Columnar sections of exposures in bluff of Mill creek, Cherokee township, Cherokee county ........................................ 374
52. Contour map showing location of gravel pits in section 14, Cherokee township, Cherokee county ............................................ 378
53. Sketch of exposure in Sibley, Osceola county ........................................... 391
54. Profiles along Little Sioux valley from Milford to Spencer .................. 395
55. Sketch showing altitude of benches along Little Sioux valley from the north line of Cherokee county to Anthon, Woodbury county .... 401
56. Profiles along Waterman creek valley from Hartley to its mouth .......... 403
57. Profiles along Murry creek valley from Sutherland to its mouth ........... 403
58. Profiles along Mill creek valley from central O'Brien county to its mouth ........................................................................ 404
59. Map of part of Cherokee county showing original extent of aggraded flat of Mill creek ................................................ 405
60. A grooved and striated contact plane between the Nebraskan and the Kansan tills ................................................................. 425
61. An exposure of Sioux quartzite at Jasper Pool, Lyon county ................. 432
62. Geologic section from the northwest corner of Iowa to Sioux City ........ 433
63. Columnar sections of deep wells at Sanborn, Cherokee and Holstein 435
